LIMOSAIN

ORGANIC FERTILIZER ENRICHED
WITH TRICHODERMA EXTRACTS

100%
ECOLOGICAL

LIMOSAIN is an innovative product resulting from plant physiology research.

Its orange and *Trichoderma harzianum* extracts based-formulation dries the shell of soft body insects up. It also acts against external organs of toxic parasites by dehydrating their cuticle.

In addition, LIMOSAIN optimizes plant nutrition by providing Bore, a beneficial nutrient which takes effect on cells division.

All these actions allow optimal growth, directing it towards root development and limiting pathogenic insect effects.

Limosain orange extracts allow to struggle against soft body pathogenic insects (larvar and/or adult forms) by dehydrating their cuticle (physical action) Ex : leafhoppers, thrips, aphids....

Application

During culture
Spray
3 l/ha every week

Composition

Trichoderma harzianum-
extracted natural flavours : 4%
Bore (B) : 2%
D-limonène : 6%

Consistent with foliar
fertilizer standards - NFU
42-003-2
Accordance with regulation
CE N°384/2007

Packing

200 l cask
1000 l cubi

Product preservation :
6° to +35° in a can
Can be stored for 5 years
